I. SUMMARY

Under Public Act 83-1243, the Illinois Health Finance Reform Act, the Illinois Health Care Cost Containment Council ("the Council") shall report to the Illinois General Assembly on "whether aggregate hospital prices during calendar year 1985 increased more than the increase of prices in the general economy, and shall identify any individual hospitals whose prices increased by more than the increase of prices in the general economy, by February 28, 1986."

To develop the required report on price increases, the Council chose to evaluate a sample of prices charged by each Illinois hospital for 17 typical services provided to the average consumer. The hospital services selected for the sample have been determined to generate a significant portion of the total revenue of most hospitals. Appendix A -Calculation Methodology contains a listing of 17 services selected for the sample.

To simplify the collection of prices, the Council designed a "Hospital Price Survey Form" to collect survey information in three areas:

1. General information
2. Hospital statistics
3. Price information for 17 services.

Using the 1984 sample price data from last year's report and the 1985 sample price data from the returned surveys, the Council calculated an estimated total percentage increase in 1985 prices as compared to 1984 prices for each hospital. The individual estimated percentage increases were aggregated to calculate the estimated statewide percentage price increase for 248 Illinois hospitals. A detailed explanation of the price increase calculation is contained in Appendix A - Calculation Methodology.

The study compares the percentage price increase for each reporting hospital and the statewide percentage price increase to the percentage price increase in the general economy. The percentage price increase in the general economy of 3.6% was based on the increase in the CPI (i.e., U.S. City Average Consumer Price Index For All Urban Consumers). Percentage price increases were also compared to the corresponding increase in the DRI (i.e., Data Resources, Inc.) which is an index intended to measure the increase in costs incurred by a typical hospital. The DRI reflected an annual increase of 4.6%.

The Report includes a list of all 248 hospitals included in the study and the percentage price increase for each hospital. Those hospitals whose percentage price increase exceeded the CPI were allowed to submit a one page explanation of their price increase. The explanations, are contained in Appendix D - Hospital Responses.

The key findings of the study were:

- . The aggregate statewide percentage price increase for all Illinois hospitals in 1985 was 3.0%. This is below the corresponding .6% increase in the CPI.
- . Of the total 248 hospitals reporting, 136 hospitals (55% of the total number of hospitals and representing 61% of total patient revenues) had percentage price increases equal to or less than the 3.6% increase in the CPI. The remaining 112 hospitals had increases in excess of the increase in the CPI.
- . A total of 76 hospitals (31% of the total number of hospitals and representing 37% of total patient revenues) reported price increases less than 1% or price decreases.

- . Of the total 248 hospitals reporting, 161 hospitals (65% of the total number of hospitals and representing 69% of total patient revenues) had percentage price increases equal to or less than the 4.6% increase in the DRI. The remaining 87 hospitals had increases in excess of the increase in the DRI.
- . The range of percentage price increases of individual hospitals reporting are distributed as follows:

<u>% PRICE INCREASE</u>	<u>NUMBER OF HOSPITALS REPORTING</u>	<u>% OF TOTAL HOSPITALS REPORTING</u>	<u>% OF TOTAL PATIENT REVENUES OF HOSPITALS REPORTING</u>
Less than or equal to 3.6% (CPI)	136	55%	61
3.6% to 4.6% (DRI)	25	10%	8
4.6% to 10.00%	73	29%	29
Greater than 10.00%	<u>14</u>	<u>6%</u>	<u>2</u>
TOTALS	248	100%	100%

The following hospitals reported too late to be included:

Provident Medical Center Chicago, IL 60615
 Univ. of Illinois - 1740 Taylor Chicago, IL 60612

The IHCCCC's study of hospital prices was designed to satisfy the specific requirements of the Illinois Health Finance Reform Act and therefore should be evaluated within the perspective of those requirements. The study focused solely on determining the percentage increase in hospital prices for 1985 as compared to 1984. It also evaluated the results against the percentage price increase in the general economy. The study did not consider the relationship of prices to such matters as improved patient care, technological advances, and facilities expansion and renovation. Also, the study did not point out, for example, instances in which a hospital with a relatively large percentage price increase had prices actually below those of other hospitals in its market area, even though those other hospitals had smaller percentage increases. Other key factors to consider when evaluating the results of the study are:

- . The percentage price increase calculation is based on a sample of typical hospital prices. The resulting percentage price increases may vary somewhat from the percentage price increases that would have been obtained by evaluating the prices of every service offered by each hospital.
- . This price study focused only on the increase in 1985 as compared to 1984, there was no historical reporting of price increases over a several year period. The percentage increase in 1985 may or may not be indicative of a hospital's typical annual price increase. evaluating the percentage price increases over several years would provide a better understanding of the trends in pricing at individual hospitals and at statewide levels.

- . Hospitals typically set prices based upon forecasts of payor mix, patient mix and intensity levels of services provided. This is a complex process that involves using various combinations of these forecasted variables to project the revenue levels required to cover the anticipated hospital costs of the forecasted period. The complexity of the revenue forecasting process, coupled with rapid changes in reimbursement methodologies and alternative methods of service delivery, make it difficult for a hospital to ensure that its intended price increase will match the percentage price increase in the general economy.
- . Many hospitals set prices based on a business cycle other than the calendar year (e.g., their fiscal year). The study was based on the calendar year 1985 as compared to calendar year 1984. A hospital's intended percentage price increase for their 1985 fiscal year may vary from the calendar year percentage price increase calculated in this study.

II. APPROACH TO THE STUDY

The Council's initial step in the 1985 Hospital Price Study was to establish several criteria upon which to base its methodology for determining the increase in hospital prices. The resulting criteria were:

- . The methodology should result in percentage price increases for each individual hospital.
- . The price increase calculation should be relatively easy to understand, should minimize the data that the hospitals must provide, and result in a consistent calculation methodology for all hospitals.
- . There should be a means of allowing hospitals to provide explanatory information to the Council concerning their price increases.

A hospital price survey form was developed for a uniform and consistent collection of pricing data. Each hospital had the opportunity to submit, review and if necessary, correct data submitted for the price survey.

III. EVALUATION OF RESULTS

Overall, the study showed that 136 hospitals (55% of the 248 reporting) had price increases below the 3.6% increase in the CPI. As a result, the statewide percentage price increase of 3.0% was also below the percentage increase in the CPI. An analysis of the study results shows that:

- . Room prices, in aggregate, increased at a higher rate than ancillary service prices. The aggregate statewide increase in room prices was 3.0% and the aggregate statewide increase in ancillary service prices was 2.9%.
- . The price increases by HSA Area vary from 1.2% to 4.9%. HSA Areas I, IV, VIII and XI had price increases above the CPI of 3.6%.

STATEWIDE PRICE SUMMARY WITH CPI AND DRI PERCENTAGES

The statewide percentage price increase of 3.0% was:

- . 17% below the CPI of 3.6%
- . 35% below the DRI of 4.6%

STATEWIDE PERCENTAGE PRICE INCREASE

STATEWIDE - ILLINOIS HOSPITALS

STATEWIDE PERCENTAGE PRICE INCREASE STATEWIDE - ILLINOIS HOSPITALS

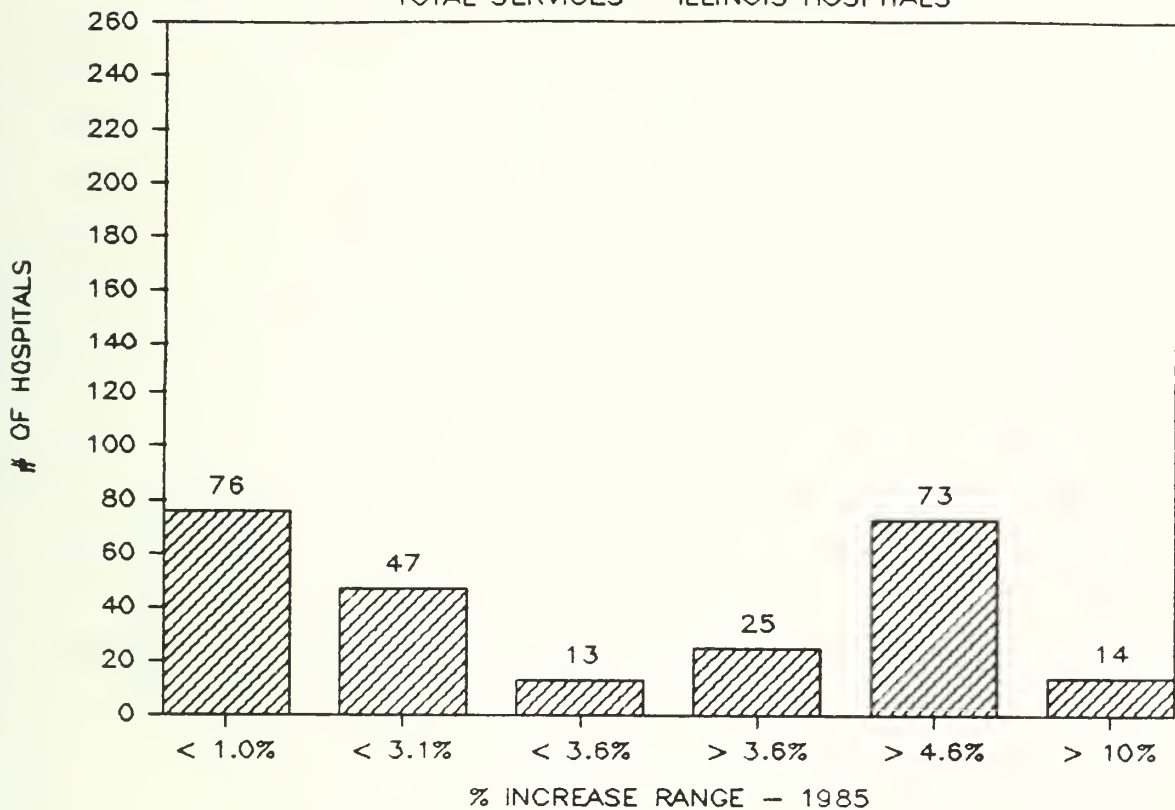

The statewide percentage price increases for all hospitals reporting were:

- . 3.0% for total services (room and ancillary)
- . 3.0% for room prices
- . 2.9% for ancillary prices

Note: Aggregate statewide percentage price increases were calculated by a weighted average of the percentage price increases of all hospitals. Weighting factors were developed based on each hospitals' total patient revenue, see Appendix A for Calculation methodology.

STATEWIDE PERCENTAGE PRICE INCREASE

TOTAL SERVICES - ILLINOIS HOSPITALS

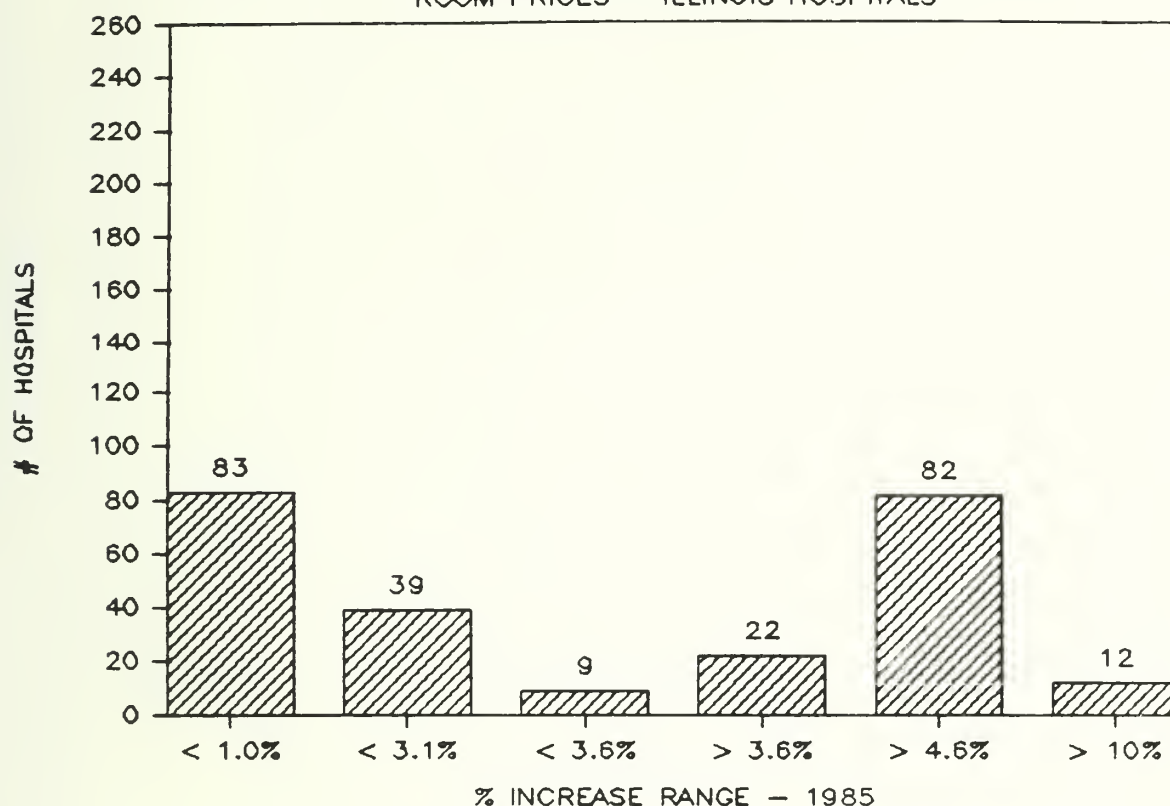

STATEWIDE PERCENTAGE PRICE INCREASE TOTAL SERVICES - ILLINOIS HOSPITALS

Of the 248 hospitals reporting:

- . 76 (31% of the total) had price increases less than 1.0%
- . 47 (19% of the total) had price increases greater than 1.0% and less than 3.1%
- . 13 (5% of the total) had price increases greater than 3.1% and less than 3.6%
- . 25 (10% of the total) had price increases greater than 3.6% and less than 4.6%
- . 73 (29% of the total) had price increases greater than 4.6% and less than 10%
- . 14 (6% of the total) had price increases greater than 10%

STATEWIDE PERCENTAGE PRICE INCREASE

ROOM PRICES - ILLINOIS HOSPITALS

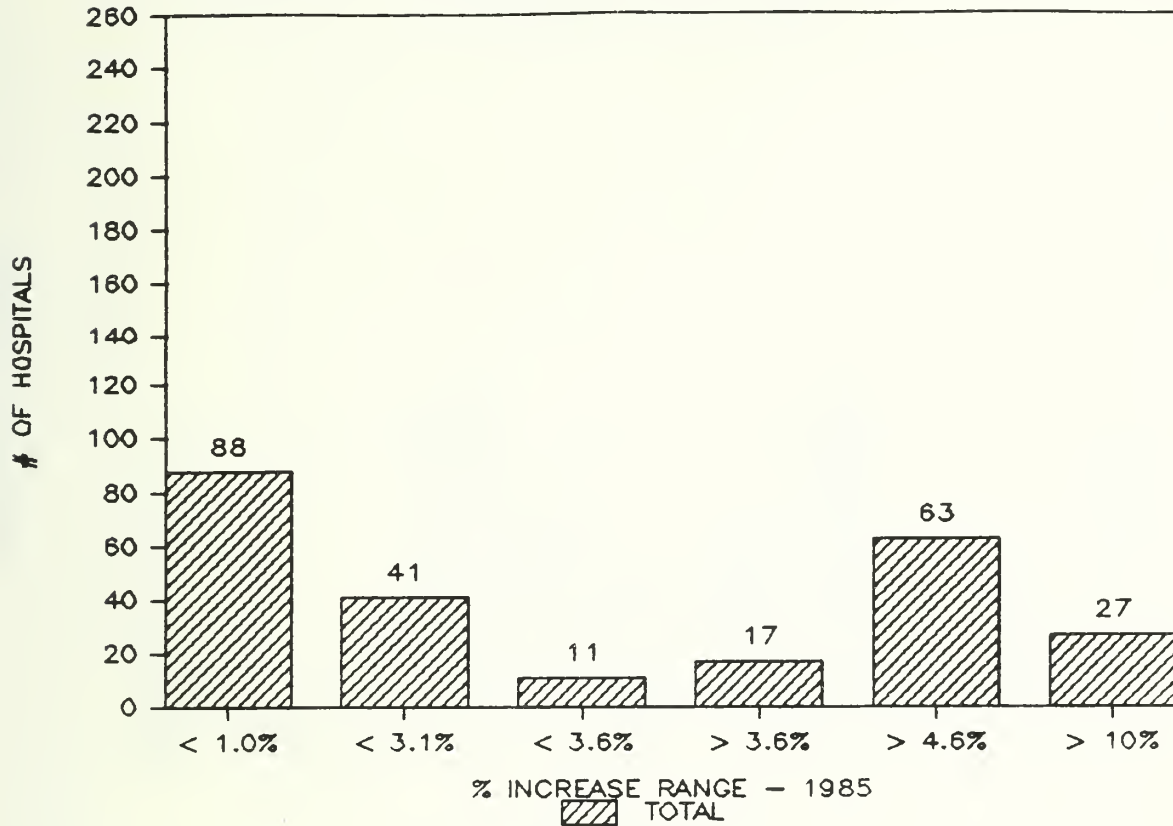

STATEWIDE PERCENTAGE PRICE INCREASE ROOM PRICES - ILLINOIS HOSPITALS

Of the 248 hospitals reporting:

- . 83 (34% of the total) had room price increases less than 1.0%
- . 39 (16% of the total) had room price increases greater than 1.0% and less than 3.1%
- . 9 (4% of the total) had room price increases greater than 3.1% and less than 3.6%
- . 22 (9% of the total) had room price increases greater than 3.6% and less than 4.6%
- . 82 (33% of the total) had room price increases greater than 4.6% and less than 10%
- . 12 (5% of the total) had room price increases greater than 10%

STATEWIDE PERCENTAGE PRICE INCREASE

ANCILLARY - ILLINOIS HOSPITALS

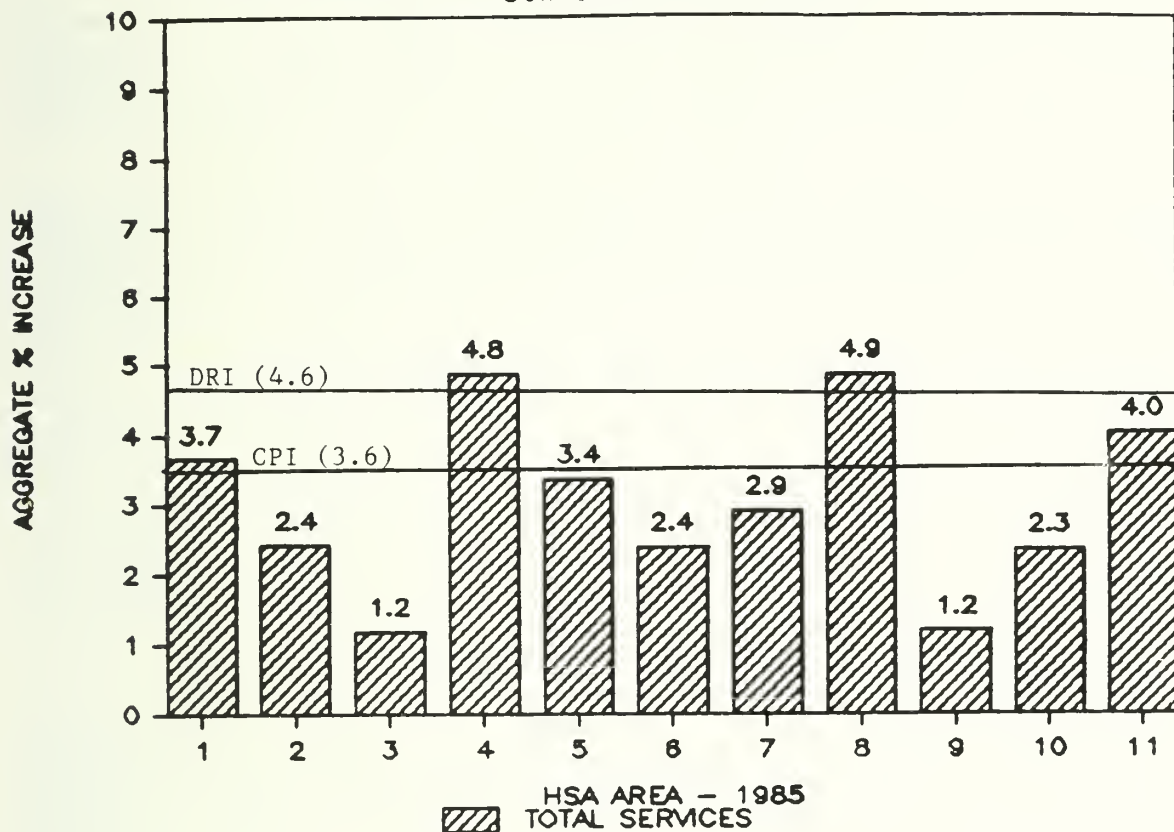

STATEWIDE PERCENTAGE PRICE INCREASE ANCILLARY - ILLINOIS HOSPITALS

Of the 248 hospitals reporting:

- . 88 (35% of the total) had ancillary service price increases less than 1.0%
- . 41 (17% of the total) had ancillary service price increases greater than 1.0% and less than 3.1%
- . 11 (4% of the total) had ancillary service price increases greater than 3.1% and less than 3.6%
- . 17 (7% of the total) had ancillary service price increases greater than 3.6% and less than 4.6%
- . 63 (25% of the total) had ancillary service price increases greater than 4.6% and less than 10%
- . 27 (11% of the total) had ancillary service price increases greater than 10%

STATEWIDE PERCENTAGE PRICE INCREASE

SUMMARY BY HSA AREA

STATEWIDE PERCENTAGE PRICE INCREASES

SUMMARY BY HSA AREA

The percentage price increases for each geographical HSA Area were as follows:

- . 3.7% for HSA Area I - hospitals in northwestern Illinois
- . 2.4% for HSA Area II - hospitals in north central Illinois
- . 1.2% for HSA Area III - hospitals in west central Illinois
- . 4.8% for HSA Area IV - hospitals in east central Illinois
- . 3.4% for HSA Area V - hospitals in southern Illinois
- . 2.4% for HSA Area VI - hospitals in Chicago
- . 2.9% for HSA Area VII - hospitals in suburban Cook and DuPage Counties
- . 4.9% for HSA Area VIII - hospitals in McHenry, Lake and Kane Counties
- . 1.2% for HSA Area IX - hospitals in Kendall, Will, Grundy and Kankakee Counties
- . 2.3% for HSA Area X - hospitals in Rock Island, Mercer and Henry Counties
- . 4.0% for HSA Area XI - hospitals in Madison, Clinton, St. Clair, Monroe Counties

Note: Aggregate percentage price increases were calculated by a weighted average of the percentage price increases of all hospitals within each HSA Area. Weighting factors were developed based on each hospital's total patient revenue, see Appendix A for calculation methodology.

LISTING OF HOSPITALS

This section contains a complete list of all 248 hospitals included in the study. The total percentage price increase in 1985 as compared to 1984 is provided for each hospital.

To obtain a better understanding of the percentage price increases shown below, refer to Appendix E - Hospital Responses for the one page explanation of price increases that were submitted by the hospitals whose percentage price increase exceeded the 3.6% increase in the CPI. The hospitals for which explanations were received are denoted by an asterisk(*).

In evaluating the percentage increases for each hospital, it is important to note that the study focused solely on determining the percentage increase in hospital prices for a sample of typical items in 1985 as compared to 1984. It also evaluated the results against the percentage price increase in the general economy.

The hospitals are listed alphabetically within the appropriate percentage increase category.

- 1.) Less Than 1.0%
- 2.) Less Than 3.1%
- 3.) Less Than 3.6% (CPI)
- 4.) Less Than 4.6% (DRI)
- 5.) Less Than 10.0%
- 6.) Greater Than 10.0%

APPENDICES

- A - Calculation Methodology
- B - CPI and DRI Indices
- C - List of HSA Areas
- D - Hospital Responses

APPENDIX A - Calculation Methodology

The calculation of each hospital's overall percentage price increase in 1985 as compared to 1984 was based on the following key assumptions:

- . The overall percentage price increases, for all services provided by a hospital, is calculated based on the most common prices of 17 typical room and ancillary services, referred to as Sample Room Prices and Sample Ancillary Prices. The Sample Prices represent a significant portion of the total revenue of most hospitals. The Sample Prices are for the following services:

Sample Room Prices - Room Charges

1. Private Room
2. Semi-Private Room
3. Rooms with 3 or More Beds
4. Intensive Care Room

Sample Ancillary Prices - Laboratory Services

1. CBC
 2. Urinalysis
 3. Blood Sugar
 4. Tissue Exam
 5. Blood Typing
 6. RH Factor
 7. Blood Chemistry
- X-Ray
 1. Chest
 2. Upper G.I.
 - Electrocardiogram
 - Operating Room (minimum)
 - Anesthesia (minimum)
 - Delivery Room (minimum)

- . The percentage price increase in 1985 as compared to 1984 is based on the average price level in each year. That is, for every sample service, the average annual price for 1985 is compared to the average annual price for 1984 in determining the percentage price increases.
- . The annual percentage price increases for sample services are weighted relative to one another. This gives a proportionate impact to the percentage increase of each sample service based on the portion of hospital revenue attributable to each service.
- . Weighting factors used in the calculation of annual percentage price increases are unique to each individual hospital. However, the weighting factors are derived from common sources of data thereby providing a consistent basis for weighting the percentage price increases.
- . For purposes of comparison between 1984 and 1985 within each hospital, the prices for a given sample service must relate to the same units of measurement over time. For example, the unit of measurement for a private room may be "most common private room per day," for a urinalysis, it may be "per test," for operating room or anesthesia minimum, it may be "per first hour," for chest x-ray it may be for "2 chest views."

- . For purposes of comparison between 1984 and 1985 within each hospital, the composition of a price must be consistent over time. For example, professional fees should be consistently excluded as a component of the unit price of a service.
- . If a hospital is unable to provide complete or comparable price data, for any sample service, that service is excluded from the percentage price increase calculation.
- . Information obtained from hospital surveys is assumed to be correct. The Chief Financial Officer or Chief Executive Officer of each hospital has attested to the accuracy of the information submitted.

Each step in the calculation of an individual hospital's percentage price increase is explained below.

Step 1 - Calculate the Average Annual Price for Each Sample Room Price

A average annual price is calculated for each Sample Room Price for 1984 and 1985. The average annual prices are calculated by prorating the prices by number of days in effect during the year.

For example, assume that the price of a semi-private room was \$190 on 1/1/84, increased to \$200 on 4/1/84, and increased again to \$215 on 10/1/84. The average annual price of this item for 1984 would be \$201.31, computed as follows:

<u>PRICE</u>	<u>EFFECTIVE DATE</u>	<u>PRORATION PERIOD (366 Days)</u>	<u>PRORATION FACTOR</u>	<u>PRORATED PRICE</u>
\$190	1/01/84	91 Days	.2486	\$ 47.23
\$200	4/01/84	183 Days	.5000	100.00
\$215	10/1/84	<u>92 Days</u>	<u>.2514</u>	<u>54.05</u>
Average Annual Semi-Private			<u>1.0000</u>	\$ <u>201.28</u>

Room Price for 1984

Step 2 - Calculate the Average Annual Price for Each Sample Ancillary Price

A average annual price is calculated for each Sample Ancillary Price for 1984 and 1985. The calculation is in the manner described in Step 1.

Step 3 - Calculate the Annual Percentage Increase for Each Sample Room Price

The annual percentage increase of 1985 over 1984 for each Sample Room Price is calculated by:

(Average 1985 Price minus the Average 1984 Price) divided by the Average 1984 Price, multiplied by 100 = Annual Percentage Increase.

For example, assume that the average 1984 price for a semi-private room is \$201.28 and that the average 1985 price is \$208.36. The annual percentage increase for this item would be 3.5% as follows: $(208.36 - 201.28) / 201.28 \times 100 = 3.5\%$.

Step 4 - Calculate the Annual Percentage Increase for Each Sample Ancillary Price

The annual percentage increase of 1985 over 1984 for each Sample Ancillary Price is calculated in the manner described in Step 3.

Step 5 - Calculate the Overall Weighted Average Increase for Sample Room Prices

The annual percentage increase for all room prices is calculated based on weighting the annual percentage increase of each Sample Room Price (from Step 3) according to the corresponding number of beds available for use. The weighted increases are summed to obtain an annual percentage increase for room prices in total.

For example, assume there are 100 private beds, 200 semi-private beds, 100 beds in rooms with 3 or more beds, and 50 intensive care beds. Also assume that the annual percentage increases for 1985 over 1984 are 4.0% for private rooms, 3.5% for semi-private rooms, 3.25% for rooms with 3 or more beds, and 5.0% for intensive care. A weighting factor for each room type is calculated by dividing the corresponding number of beds by the total number of beds. Therefore, for private rooms the weighting factor would be $100 / 450 = .222$. The weighted annual percentage increase for all room prices would be 3.72%, computed as follows:

<u>ROOM TYPE</u>	<u>ANNUAL % INCREASE</u>	<u># BEDS</u>	<u>WEIGHTING FACTOR</u>	<u>WEIGHTED ANNUAL % INCREASE</u>
Private	4.00	100	.222	.888
Semi-Private	3.50	200	.445	1.558
3 or More Beds	3.25	100	.222	.722
Intensive Care	5.00	<u>50</u>	<u>.111</u>	<u>.555</u>
TOTALS		<u>450</u>	<u>1.000</u>	<u>3.723%</u>

Step 6 - Calculate the Overall Weighted Average Increase for Sample Ancillary Prices

The annual percentage increase for all ancillary prices is based on a weighted average of the annual percentage price increases in Sample Ancillary Categories. The first step in this calculation is to determine the annual percentage increase of each Ancillary Category. For example, assume that the annual percentage increases for Sample Ancillary Prices (from Step 4) are those listed below in the left-hand column. The resulting percentage increases by Ancillary Category are listed in the right-hand column:

	<u>% INCREASE BY ITEM</u>	<u>% INCREASE BY CATEGORY</u>
Lab Tests		
1. CBC	4.0	
2. Urinalysis	0.0	
3. Blood Sugar	6.5	
4. Tissue Exam	0.5	
5. Blood Typing	3.5	
6. RH Factor	3.0	
7. Blood Chemistry	4.0	
Total Lab (Sum of 1 to 7 = 21.5 / 7)		3.07
X-Rays		
1. Chest	4.5	
2. Upper GI	5.0	
Total X-Ray (Sum of 1 and 2 = 9.5 / 2)		4.75
Electrocardiogram	3.0	3.00
Operating Room	2.5	2.50
Anesthesia	4.5	4.50
Delivery Room	5.8	5.80

In the next step of the calculation, weighting factors are developed to be used to weight the percentage increases in Ancillary Categories. The weighting factors are derived from charge data taken from the appropriate Column of Worksheet C of each hospital's most recent Medicare Cost Report. For example, assuming the charges from Worksheet C are those listed below, the weights are calculated by dividing the corresponding charges by the total charges. Therefore, for Laboratory the weighting factor would be \$45 / \$100 million = .45, as shown in the example below.

<u>COST CENTERS</u>	<u>CHARGES (000's)</u>	<u>WEIGHTING FACTOR</u>
Laboratory	\$ 45,000	.45
Radiology-Diagnostic	15,000	.15
Electrocardiology	6,000	.06
Operating Room	25,000	.25
Anesthesiology	8,000	.08
Delivery Room	<u>1,000</u>	<u>.01</u>
Total	<u>\$100,000</u>	<u>1.00</u>

The final step of this calculation is to weight the percentage increases by Ancillary Category according to the weighting factors developed in the previous step. Assuming the percentage increases and weighting factors from the previous examples, the annual percentage increase for all ancillary prices would be 3.32% computed as follows:

<u>ANCILLARY CATEGORY</u>	<u>% INCREASE BY CATEGORY</u>	<u>WEIGHTING FACTOR</u>	<u>WEIGHTED ANNUAL % INCREASE</u>
Laboratory Test	3.07	.45	1.382
X-Ray	4.75	.15	.713
Electrocardiogram	3.00	.06	.180
Operating Room	2.50	.25	.625
Anesthesia	4.50	.08	.360
Delivery Room	5.80	<u>.01</u>	<u>.058</u>
Total Ancillary Price Increase		<u>1.00</u>	<u>3.318</u>

If a Medicare Cost Report was not available for a hospital, the annual percentage increase for all ancillary prices was based on a simple average of the percentage increases in Ancillary Categories. Assuming the same percentage increase from the previous examples, the annual percentage increase for all ancillary prices would be 3.93%, computed as follows:

<u>ANCILLARY CATEGORY</u>	<u>% INCREASE BY CATEGORY</u>
Laboratory Tests	3.07
X-Ray	4.75
Electrocardiogram	3.00
Operating Room	2.50
Anesthesia	4.50
Delivery Room	<u>5.80</u>
Sum of Percentages	23.62
Average Annual Increase	<u>3.93%</u>
(23.62 / 6)	

Step 7 - Calculate the Overall Annual Percentage Increase for Each Hospital

The overall annual percentage increase for each hospital is calculated based on weighting the Overall Weighted Average Increase for Sample Room Prices (from Step 5) and the Overall Weighted Average Increase for Sample Ancillary Prices (from Step 6) according to the total inpatient revenue produced by room and ancillary services. The weighting factors were developed from inpatient revenues obtained from financial statements filed with each hospital's most recent Medicare Cost Report or from Worksheet G-2 of the Medicare Cost Report.

For example, assume that a hospital's Gross Room Revenue was \$60 million and that Gross Inpatient Ancillary Service Revenue was \$40 million. The weighting factors would be 60% for room price increase and 40% for ancillary price increase.

Furthermore, assume that the hospital's Overall Weighted Average Increase for Sample Room Prices (from Step 5) is 3.72% and that the Overall Weighted Average Increase for Sample Ancillary Prices (from Step 6) is 3.32%. The Overall Annual Percentage Increases for the hospital, based on the 60/40 weighting factors, would be 3.56%, computed as follows:

	WEIGHTED AVERAGE % INCREASE	WEIGHTING FACTOR	OVERALL ANNUAL % INCREASE
Room	3.72	.60	2.232
Ancillary	3.32	.40	1.328
Total Hospital		<u>1.00</u>	<u>3.56</u>

If appropriate inpatient revenue data were not available from the hospital's Medicare Cost Report, the room vs. ancillary weighting factors will be 47.37% for room price increase and 52.63% for ancillary price increase. The 47.37/52.63 ratio is the statewide average developed from the inpatient revenue data that was available from Medicare Cost Reports for the majority of hospitals.

The statewide annual percentage price increase for all Illinois hospitals is calculated by a weighted average of the Overall Annual Percentage Increase for Each Hospital (from Step 7). The weighting factors were developed based on total patient revenues. That is, the total patient revenues of all hospitals were summed to obtain the total statewide patient revenue. The weighting factor for each hospital is calculated by dividing each hospital's total patient revenue by the total statewide patient revenue.

For example, assume that a hospital's total patient revenue was \$150 million. Given that the total statewide patient revenue was approximately \$9.4 billion, the example hospital received a weighting factor of .0159, computed as follows:

$$\$150 \text{ million} / \$9.4 \text{ billion} = .0160$$

The calculation of the statewide annual percentage price increase is illustrated in the following example:

<u>HOSPITAL</u>	HOSPITAL'S OVERALL % INCREASE	PATIENT REVENUE (IN 000'S)	WEIGHTING FACTOR	WEIGHTED AVERAGE % INCREASE
Hospital A	3.64	\$ 150,000	.0160	.0582
Hospital B	5.50	75,000	.0080	.0440
Hospital C	4.75	50,000	.0053	.0252
.				
.				
		<u>\$9,400,000</u>	<u>1.0000</u>	
Total Statewide Percentage Price Increase				<u>3.0%</u>

APPENDIX B - CPI AND DRI INDICES

The percentage price increase in the general economy was based on the increase in the CPI (i.e., U.S. City Average Consumer Price Index For All Urban Consumers) which is determined to be an annual increase of 3.6% in 1985 as compared to 1984. The percentage increase in the CPI was determined as follows:

<u>MONTH</u>	<u>MONTHLY INDEX</u>	
	<u>1984</u>	<u>1985</u>
January	305.2	316.1
February	306.6	317.4
March	307.3	318.8
April	308.8	320.1
May	309.7	321.3
June	310.7	322.3
July	311.7	322.8
August	313.0	323.5
September	314.0	324.5
October	315.3	325.5
November	315.3	326.6
December	315.5	327.4
Annual Average (1)	<u>311.1</u>	<u>322.2</u>
Percentage Increase (2)		<u>3.6%</u>

(1) Sum of monthly index values divided by 12

(2) $(322.2 - 311.1) / 311.1 \times 100 = 3.6\%$

For additional information purposes only, hospital price increases were compared to the increase in the DRI which is an index intended to measure the increase in costs incurred by a typical hospital. The percentage increase in the DRI is determined as described below. Note that the index level is equal to 1.000 in the fourth quarter of 1985 and consists of forecasted data.

<u>QUARTER</u>	<u>QUARTERLY INDEX</u>	
	(2) <u>1984</u>	<u>1985</u>
First	.927	.974
Second	.937	.982
Third	.949	.991
Fourth	.961	1.000
Annual Average (1)	<u>.944</u>	<u>.987</u>
Percentage Increase (3)		<u>4.6%</u>

(1) Sum of quarterly index values divided by 4

(2) The index for 1984 used in the 1984 report has been rebased to make it comparable to the 1985 index. This does not alter the escalation rate patterns, reported in 1984.

(3) $(.987 - .944) / .944 \times 100 = 4.6\%$
